A Higher Level Notation

- Up until now we used Verilog at the Gate Level
- There are higher levels of description, e.g., RTL
- Verilog can be used also for RTL
- However, it is too abstract for the course needs
- So we will use an easy variation

Several examples will do

$$\sum_{i=0}^n i \text{ comb.}$$
$$\sum_{i=0}^n i \text{ program}$$

Method 1

Method 2
